

Network-Wide Server, Device & Event Monitoring, Alerting & Automatic Corrective Action

PageR *Enterprise* (PageR) is available in two (2) different ‘Editions’ known as *Enterprise* and *Data Center*. Basically, Enterprise Edition monitors any and all Windows NT/2K/XP/2K3 or Novell NetWare systems across your network. Data Center Edition provides the widest monitoring capabilities for any and all OS platforms in your data center and across your worldwide network. These are explained further below. A single installation is all you need to monitor network-wide. There are “no rules” to learn and there are “no agents” to deploy and manage. It’s powerful and yet easy to use. See for yourself by downloading PageR today and then run your own evaluation.

Pricing depends upon the ‘Edition’ and ‘License’. Enterprise and Data Center editions each offer scalable license levels based upon the number of ‘Monitored Objects’ enabled. If you purchase one license, you can upgrade to a larger at any time by simply paying the difference. If you upgrade, you’ll receive a 100% credit for the license you have. Even the small bundled licenses that come with Room Alert and TemPageR hardware. This protects your investment and allows you to get started without spending more than you need.

Monitored Objects are items or issues that you set up within PageR to watch or monitor (i.e. servers, devices, logfiles, services, web pages, systems, performance counters, ports, SNMP devices, files, more). Some monitored objects allow monitoring of an unlimited number of similar items, while others like a “ping” monitored object allow the monitoring of just one item. Select what to monitor and can change as their needs change.

Enterprise Edition can monitor ANY and ALL the Windows NT/2K/XP/2K3 servers, systems, event logs, files, disks, devices and objects on the network, and includes monitoring Novell NetWare Servers, network-wide IP Ping capability and SNMP Traps/Queries. It includes Unlimited Contact Objects, Unlimited Alarm Objects, powerful Web Browser Interface, Unlimited Web and Manual Paging, Website and Web Server monitoring, WMI, Win32, Network-Wide Event Console, Network-Wide Systems Console, multi level Web Browser Access/Security, Scalable Architecture, Sophisticated Alerting to Individuals/Groups/Hierarchies, Superior Support in both pre-sales and post-sales, and optional Computer Room Environment & Security Monitoring. ***‘Enterprise’ is the ‘Windows Centric, Network-Wide’ version of PageR!***

Enterprise Edition is licensed for 20, 50 and Unlimited Objects. It is bundled with Room Alert and TemPageR.

Data Center Edition can monitor ANY and ALL systems worldwide on your network, that means everything that is included with the Enterprise Edition. Additionally, Data Center includes SYSLOG monitoring, special monitoring for UNIX (HP-UX, AIX, DEC Unix, Sun, Sequent, SCO, more), OpenVMS, MPE, AS/400, HP3000, RS6000, VME, Linux, more. It further includes DNS, IIS, TCP, UDP, Bandwidth monitoring, FTP Services, Host Login, Event Logging and Reporting. ***‘Data Center’ is the ‘Any OS, Top Of The Line’ version of PageR!***

Data Center Edition is licensed for 50 and Unlimited Objects.
